# Logo Options

**Cast Metal** logos are a premium choice for 3D logo replication. Modeled logos involve either hand sculpting or CNC routing an image. The modeled logo is then hand-finished. Available on cast bronze or cast aluminum products.

**Dendron™ Medallion** is a revolutionary material made by combining the latest technology in graphic printing with recycled content through extreme heat and pressure. The finished product provides unmatched quality graphics that are able to sustain any environment's harshest conditions. Dendron™ is the golf industry's only outdoor graphic material backed by a 10 year warranty, making it a perfect economical solution for signage, markers and course furnishings.

**Etched Medallion** is used for extremely detailed logos. Available on bronze, aluminum, copper, stainless steel and zinc metals.

**Waterjet Cut** is an elegant option, adding a touch of class to your item. Waterjet cut logos and letters can be flat mounted or mounted with "standoffs" to give a dimensional look. Available in metal or acrylic.

**Engraved Wood** when used for detailed logos will give you outstanding results on hardwoods.

**Routed and Infilled** logos are routed, etched or sandblasted and then infilled with a colored resin or paint.

**Cold Cast** logos, can be made by hand or machined, and offer an alternative to cast metal logos. A variety of finishes are available.

**Digitally Printed** logos provide unlimited colors and detail. Logos can be printed onto laminated vinyl which can be attached to a wide variety of substrates, or your logo can be directly printed onto acrylic or polycarbonate substrate.

**Please contact a sales consultant for assistance determining which logo style best fits your need.**

# About Our Materials

We've assembled a variety of material and color finishes that can be applied to our entire product line to ensure our products do the most to enhance the look of your property. But we didn't stop there. Arete Industries supports the practice of sustainability, and our materials are derived from the same ideology.

## Recycled Plastic

Virtually maintenance-free, this recycled plastic material generally contains over 95% high-density polyethylene (ReHDPE). Recycled HDPE doesn't absorb water or harbor harmful mold or bacteria, creating a healthier environment for you and the rest of the world.

Hardwood

Lamboo® is an engineered high-performance bamboo product sourced from sustainably managed plantations. Structurally superior to its wood counterparts, Lamboo® can be manufactured in both interior and exterior grades and comes in a variety of aesthetically pleasing grain patterns. Lamboo® furnishings require periodic maintenance.

Garapa wood, also known as Brazilian Ash, is a dense and naturally durable Brazilian timber. Its golden color, fine grain, and moderate cost make it an attractive alternate to more expensive hardwoods. The light color also makes it optimal for environments that have heavy sun exposure, as it will not become overly hot to the touch. Periodic maintenance is required. Left untreated, the wood will develop a silver/gray patina.

Ipe wood products manufactured by Arete Industries are harvested from sustainable forests and are Lacey Act compliant. Ipe wood is denser than garapa wood and resistant to preservation treatments, decay, fungi, and termites. Left to nature, the color of your outdoor ipe furnishings will gradually change to light gray. Power washing will restore its original appearance even after the gray color appears. Periodically applying a protective finish will help your ipe resist weathering and retain its original color.

# Why Stop There?

Thanks to our unique “Designer to Client” process, Arete Industries can coordinate furnishings across your entire property.

We also offer products such as:

- Waste Receptacles
- Greeting Podiums
- Beverage Stations
- Signage
